

Complexité des algorithmes

Calculer la complexité des algorithmes suivants :

```
1.
For i From 2 to n Do
    k ← i-1;
    x ← T[i];
    While (T[k] > x et k > 0) Do
        T[k+1] ← T[k];
        k ← k-1;
    End While;
    T[k+1] ← x;
End For;
```

```
4.
Function Fib( n : entier) : entier;
Begin
    If (n < 2) Then
        Fib ← 1;
    Else
        Fib ← Fib(n - 1)+Fib(n - 2);
    End If;
End;
```

```
2.
i ← n;
S ← 0;
While (i > 0) Do
    j ← 2*i;
    While (j > 1) Do
        S ← S+(j-i)* (S+1);
        j ← j-1;
    End While;
    i ← i div 2;
End While;
```

```
3.
i ← 1;
j ← 0;
For k From 1 to n Do
    j ← i+j;
    i ← j-i;
End For;
```

Que fait cet algorithme sachant que le résultat est dans j ?

```
5.
P ← 1;
For I From 1 to n Do
    J ← 1;
    K ← 1;
    While (K ≤ n) Do
        P ← P * (K + J);
        K ← K + 1;
        If (K > n) Then
            J ← J + 1;
            If (J ≤ n) Then
                K ← 1
            End If;
        End If;
    End While;
End For;
```

6.

```
i ← 1;  
While (i < n) Do  
    j ← 1;  
    While (j < 2*n) Do  
        j ← j*2;  
    End While;  
    i ← i+1;  
End While;
```

8.

```
i ← 1;  
j ← 1;  
While (i < n) Do  
    If (j < n) Then  
        j ← j * 2;  
    Else  
        j ← 1;  
    End If;  
    i ← i + 1;  
End While;
```

7.

```
Var x : entier ;  
Function f( i, j, k : entier) : entier;  
Begin  
    If (k+j = i) Then  
        f ← ((i-j) div k) + 1;  
    Else  
        x ← f(i, j+1, k-2);  
        f ← f(i+1, j+x, k-2);  
    End If;  
End;
```

9.

```
Procedure F( x, y, z : réel);  
Begin  
    y ← 2 * z;  
    If (x > x/(y - z)) Then  
        x ← x - 2;  
        y ← y/4;  
        z ← z/5;  
        F(x, y, z);  
    End If;  
End;
```

*** Bonne chance ***
